# Hantavirus Prevention

## Hantavirus Prevention

Hantavirus infection is caused by a virus that people can get through contact with urine, droppings, or saliva of wild rodents, specifically **deer mice**. You can help prevent hantavirus infection by keeping wild rodents out of your home or workplace.

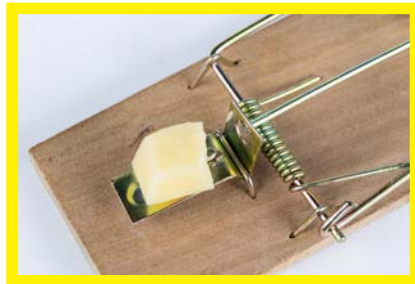

If you find live or dead mice, nests, droppings, or chew marks indoors, it is important to follow these steps:

**1 SEAL**  
openings where mice can enter

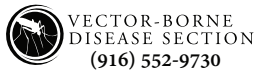

**2 TRAP**  
mice with a snap trap

**3 CLEAN**  
contaminated areas with a disinfectant

**DO NOT** sweep or vacuum!

Before entering a building or room that may be infested with rodents, allow the area to air out for at least 30 minutes. You can get hantavirus by breathing in air that is contaminated with the virus.

## Prevención del Hantavirus

La infección por hantavirus es causada por un virus que las personas pueden contraer a través del contacto con la orina, los excrementos o la saliva de roedores salvajes, específicamente **ratones ciervo**.

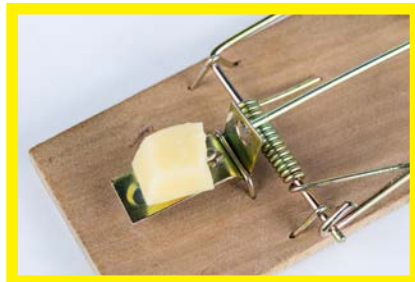

Puede ayudar a prevenir la infección por hantavirus manteniendo a los roedores salvajes fuera de su hogar o lugar de trabajo. Si encuentra ratones vivos o muertos, nidos, excrementos o marcas de masticación en interiores, es importante que siga estos pasos:

**1 SELLE**  
las aberturas por donde puedan entrar los ratones.

**2 ATRAPE**  
ratones con una trampa rápida.

**3 LIMPIE**  
las áreas contaminadas con un desinfectante.

**¡NO** barra ni aspire!

Antes de entrar en un edificio o habitación que pueda estar infestada de roedores, deje que el área se ventile durante al menos 30 minutos. Puede contraer el hantavirus si respira aire contaminado con el virus.
